

Minnesota Learning Resource Center New Year's Book Sale and Clearance

Brain Matter

In this book, Patricia Wolfe makes it clear that before we can effectively match teaching practice to brain functioning, we must first understand how the brain functions. The author describes the brain anatomy and physiology, brings brain functioning into clearer focus, and devotes several chapters to practical classroom applications and brain-compatible teaching strategies.

Biological Treatments for Autism and PDD

This book is an authoritative, comprehensive, and easy-to-read resource guide to a wide range of therapies that have been useful in the treatment of autism including antifungal and antibacterial therapies, gluten and casein restriction, homeopathy, vitamin therapy, gamma globulin treatment, transfer factor therapies, treatment of food allergies, and alternatives to antibiotic therapy.

Dr. Mercola's Total Health Cookbook

Featuring world-renowned natural health physician Dr. Joseph Mercola's dietary program in part one and over 150 healthy and delicious new recipes in part two. Designed to help prevent disease, premature aging, optimize weight, increase energy, and love what you eat while doing so, Mercola's easy to follow program will help you avoid and eliminate the underlying causes of health and weight issues.

Built entirely around a natural approach, including eating only the cleanest and healthiest forms of proteins, fats and car

If Kids Just Came with Instruction Sheets

This book combines a wealth of information from specialists in the fields of child development, nutrition, allergies, and sensory integration with interesting anecdotes from the author's many years of experience in dealing with children. Numerous therapies which can remedy the causes of behavior problems, learning disabilities, attention problems, delinquency, and drug abuse are outlined in this wonderfully comprehensive resource. Svea Gold's fascinating book is well researched and well written, and is one of the best of its kind.

Magic Trees of the Mind

In Magic Trees of the Mind, pioneer brain researcher Dr. Marian Diamond and top science journalist Janet Hopson take us through the evolutionary journey of a child's brain, showing how our minds are stimulated in specific ways at every age. This mental stimulation produces prolifically branching neurons - The "magic trees of the mind" - which are capable of processing ever greater amounts of information as they grow. Under nature's own code of "use it or lose it," a child who experiences appropriate stimulation gains the increased capacity to develop his or her full potential, and is set on the path of lifelong learning. Based on interviews with noted scientists in the field and original surveys of thousands of parents and children, here are detailed analyses of cutting-edge programs designed to develop and expand your child's mind, including prenatal stimulation and enrichment ideas for babies, toddlers, preschoolers, grade school children, and teenagers. Complete with a comprehensive resource guide of

related books, products, organizations, websites, and learning centers, Magic Trees of the Mind renews our birthright to "think, learn and create," with the encouraging news that, although there are critical periods for learning, it's never too late to plant another tree.

Our FAScinating Journey

Jodee Kulp's workshops, books and educational materials have been well received in a broad base of communities. She has an international reputation as an expert in FASD. Beyond her ability to speak and write about issues related to FASD, she has campaigned tirelessly to advocate for children born with FASD and for the families who care for them.

The Best I Can Be

A companion book to **Our FAScinating Journey**, it is written by Jodee Kulp's daughter Liz and discusses her journey with Fetal Alcohol Syndrome.

Reflexes, Learning and Behavior, a Window into the Child's Mind

When Peter Blythe at the Institute of Neuro-Physiological Psychology began to search for a physical basis to learning and behavior problems, he found that detection and analysis of primitive and postural reflexes can be used as a valuable tool for physicians, psychologists, teachers and parents to find out why a child is not performing at age level.

This research impacts not only how these experts perceive each child but also helps them to determine what interventions will be most effective.

Sally Goddard, director, researcher and therapist at the Institute, has taught many school districts to take advantage of this knowledge in the classroom. Since the Institute's way of thinking is backed up by decades of neurological research that proved that the brain is indeed plastic, teachers in Sweden, Germany, Australia and the United States are applying Goddard's knowledge. They find that when children have the basic equipment for learning, teaching methods become more effective and the children blossom. Then, if a child still lags behind, they are learning to answer the question "Why?" and can help that child to succeed.

The Good Path, Ojibwe learning and activity book for kids

Kids of all cultures journey through time with the Ojibwe people as their guide to the Good Path and its nine universal lessons of courage, cooperation, and honor. Through traditional native tales, hear about Grandmother Moon, the mysterious Megis shell, and the souls of plants and animals. Through Ojibwe history, learn how trading posts, treaties, and warfare affected Native Americans. Through activities designed especially for kids, discover fun ways to follow the Good Path's timeless wisdom every day.

The Out of Sync Child

The Out-of-Sync Child broke new ground by identifying Sensory Processing Disorder, a common but frequently misdiagnosed problem in which the central nervous system misinterprets messages from the senses. This newly revised edition features additional information from recent research on vision and

hearing deficits, motor skill problems, nutrition and picky eaters, ADHA, autism, and other related disorders.

Unicorns are Real, a Right-Brained Approach to Learning

This book contains 65 easy-to-do activities that draw on the special intuitive, nonverbal abilities of the right brain so often overlooked in schools today. A unique screening checklist enables parents and teachers to identify individual learning preferences. Learn how to utilize colors, shapes, movement, visualization, touch and sound to help students of all ages learn to read, tell time, add, subtract, and even spell correctly.
